The Need

Despite the best efforts of doctors, researchers, and countless organizations, cancer remains a concern for many individuals and families. People from all walks of life are at risk regardless of age, sex, or ethnic background.

*In the United States, men have slightly less than a 1-in-2 lifetime risk of developing cancer; for women the risk is a little more than 1-in-3.**

While major medical insurance can help with the costs of cancer treatment, you may still have out-of-pocket expenses that are not covered by your major medical insurance, including travel, food, lodging, child care, and household help. Meanwhile, living expenses such as car payments, mortgage or rent payments, and utility bills continue, whether or not you are able to work. And if a family member has to stop working to take care of you, the loss of income may be doubled.

The Maximum Difference Cancer Insurance Policy:

- No deductibles or copayments.
- Fully portable.
- Guaranteed-renewable.
- No network restrictions—you choose your own medical treatment provider.

Aflac pays cash benefits directly to you, unless you choose otherwise. This means you will have additional resources to help with the financial consequences of cancer that may not be covered by major medical insurance.

As long as cancer is in this world, Aflac will innovate to fight it.

In 1958, Aflac introduced its first cancer policy. The goal was to help protect individuals and their families from the damage that cancer can do both physically and financially. By paying cash benefits to its policyholders, unless they designated otherwise, Aflac's coverage provided a level of freedom that many major medical insurance companies simply could not.

Today, millions of individuals are still battling cancer, and about 1,437,180 new cancer cases were expected to be diagnosed in 2008.* But the fight against cancer has changed in many ways. Advances in pharmaceuticals, surgical procedures, and alternative treatments have improved the odds for those diagnosed with the disease, and Americans diagnosed with cancer are living longer than ever. The five-year relative survival rate for all cancers diagnosed between 1996 and 2003 is 66 percent, up from 50 percent in 1975–77.* But with improved treatments, increased costs have arrived as well. **Aflac's Maximum Difference policy addresses these concerns with benefits that reflect evolving cancer treatments.**

The Maximum Difference[®] policy continues Aflac's goal of providing groundbreaking coverage at affordable rates. One day, cancer will cease to be a threat. Until then, there's Aflac.
